Product Description

LF-GSD040YC series is a 40W constant current LED driver with five dimming functions in one, including DALI dimming, push dimming, 0-10V dimming, PWM dimming and Rx dimming. Its input voltage limit is 198-264VAC. Its output current can be selected from 550mA to 1050mA via the DIP switch, 50mA every step. It conforms to DALI 2.0 compatibility certification including IEC 62386-101, 102, 207.

Product Feature

- Constant current output. The current value can be selected via a DIP switch, 50mA every step.
- Plastic casing. Suitable for the Class I and Class II light fixtures
- Built-in active power factor correction function
- Stand-by power consumption less than 0.5W
- DALI dimming. The logarithmic dimming and the linear dimming curve are optional.
- Push dimming
- Synchronous dimming: up to 10 drivers share one IP address
- Warranty: 7 years (Please refer to the warranty condition.)

Application

- Plant lighting
- Indoor office lighting
- Decorative lighting
- Commercial lighting
- Residential lighting
- Flood light

| Others | DALI Executive Standard | IEC 62386-101, 102, 207: DALI 2.0 | | | | | |
| | Noise Rating | \leq 29db (Tested in a silent room and the noise collector was 10cm away from the power supply.) | | | | | |
| | TRIAC Dimmer | 1 | | | | | |
| Testing Equipment | electronic load: M9712B, LED boa | , digital power meter: CHROMA66202, Oscilloscope: Tektronix DPO3014, DC rd, constant temperature and humidity chamber: MQ-1000-3000, lightning surge B, rapid group pulse generator: Everfine EMS61000-4A, spectrum analyzer: ght flicker analyzer: LFA-3000, etc. | | | | | |
| Testing Condition | | neters of the power factor and efficiency are the test results under the ambient of 50%, AC input of 230V and 100% load. | | | | | |
| | 1. It is recommended that custome to ensure safety before connecting | r should install an over & under voltage protection and surge protection device to electricity. | | | | | |
| Additional Remark2. The PC cover, housing, end caps and other parts of the LED driver inside the LED light fixture mut to UL94 V-0 flammability standard or above. | | | | | | | |
| | 3. As an accessory, the LED driver is not the only factor determining the EMC performance of the LED light fixture. The structure and the wiring of the light fixture are also relevant. Thus it's strongly recommended the LED light fixture manufacturer re-confirms the EMC of the whole LED light fixture. | | | | | | |
| | | | | | | | |

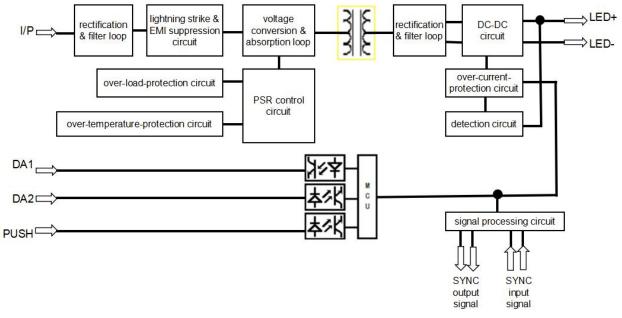

Circuit Breaker & Relevant Parameters

| Name | Value | Remark |
|--|---------------|---|
| Surge peak current (Ipeak) | 47.6A | Input voltage 230Vac |
| Surge half-peak time (Twidth) | 161µs | Input voltage 230Vac. Measure the time for Ipeak to drop to its half value. |

4. Dimming curve

Instruction of Dimming Operation

1. Wiring diagram of push dimming

(1) Push dimming

| Operation | Operation Time | Function |
|--------------|-------------------|-------------------|
| Instant Push | 0.1 ~ 0.5 seconds | Light On / Off |
| Long Push | 0.5 ~ 11 seconds | Brighter / Dimmer |
| Reset Push | > 11 seconds | Back to Brightest |

- (2) The push operation won't cause any variation if it's less than 0.1 second.
- (3) When controlling via the same button, in 0-10V mode, up to 10 drivers can be connected in parallel. In DALI & push dimming mode, using SYNC DIM connection, there can be up to 640 drivers connected in parallel.
- (4) The button can only be connected to the AC-L and the PUSH terminals of LF-GSD040YC. Connecting to AC-N will cause the push dimming function failure.
- (5) The minimum dimming depth of the push dimming is 4% (lout).
- (6) The push dimming mode has memory function in case of power failure. Power up the driver again and the light will returned to the state before the power failure.
- (7) In push dimming mode, the current dimming direction is opposite to the previous dimming direction.

2. DALI dimming

- (1) Connect DALI signal to the DA1 and DA2 terminals.
- (2) DALI protocol includes 16 groups and 64 IP addresses.
- (3) The minimum dimming depth of the DALI dimming is 2% (lout).

3. 0-10V, PWM & Rx dimming

- (1) 0-10V, PWM and Rx signals should be connected to the DIM terminal.
- (2) In 0-10V mode, the light turns off when the input voltage is below 0.3V and turns on when it's above 0.5V.
- (3) The minimum dimming depth of the 0-10V dimming is 5% (lout).
- (4) 0-10V dimming

| Dimming voltage | ≤0.3V | 1V | 2V | 3V | 4V | 5V | 6V | 7V | 8V | 9V | 10V |
|--------------------------------|-------|-----|-----|-----|-----|-----|-----|-----|-----|------|------|
| Rated current percentage | OFF | 10% | 20% | 35% | 45% | 60% | 70% | 80% | 90% | 100% | 100% |

LF-GSD040YC

(5) PWM dimming

| PWM signal | 0% | 10% | 20% | 30% | 40% | 50% | 60% | 70% | 80% | 90% | 100% |
|--------------------------------|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| Rated current percentage | OFF | 20% | 40% | 50% | 65% | 75% | 90% | 95% | 100% | 100% | 100% |

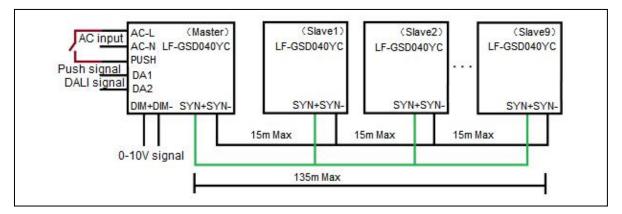

(6) Rx dimming

| Resistance | 0К | 10K | 20K | 30K | 40K | 50K | 60K | 70K | 80K | 90K | 100K |
|--------------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|
| Rated current percentage | OFF | 30% | 50% | 65% | 75% | 80% | 85% | 90% | 95% | 100% | 100% |

Remark: Factory default setting is 100% luminance.

4. Synchronous dimming

- (1) Maximum 10 pcs of LF-GSD040YC can be dimmed synchronously (one master and nine slaves). The maximum wire length between two products is 15m. The maximum wire length between the master and the farthest slave is 135m. Wire diameter: 16-22AWG.
- (2) The method of switching to synchronous dimming: choose a driver as a master and switch the fifth gear on the DIP switch to ON.
- (3) The master can directly control slaves via DALI and push dimming signals to realize synchronous dimming function.
- (4) Wiring diagram of synchronous dimming:

- (5) Before using synchronous dimming function, make sure all LF-GSD040YC are at 100% output.
- (6) When the synchronous dimming signal is withdrawn from the slaves, the slaves enter DALI mode by default.
- 5. Switch between dimming modes
 - (1) Switch to DALI dimming

After powering up the driver for two seconds, press the DALI dimmer for ON/OFF operation. And then it becomes DALI dimming mode.

(2) Switch to push dimming

After powering up the driver for two seconds, long press the push switch for over three seconds. And then it becomes push dimming mode.

(3) Switch to 0-10V dimming

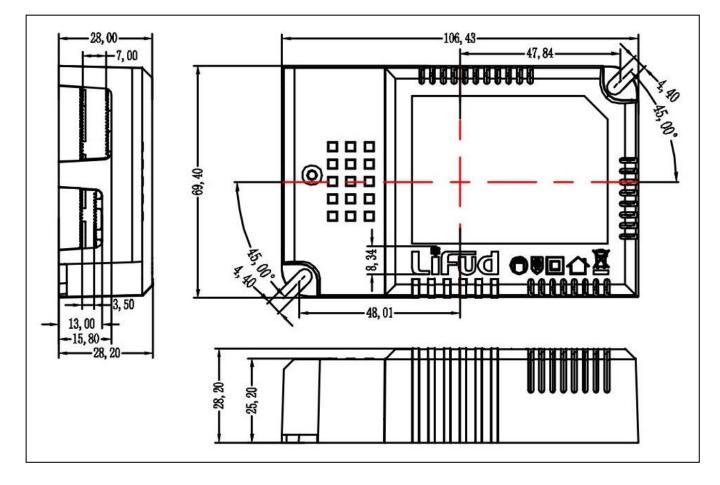

After powering up the driver for two seconds, adjust the 0-10V dimmer, from the brightest state to the dimmest state or the opposite. One second later, it becomes 0-10V dimming mode.

Remark: In order to switch the DALI mode to another mode, the light must be on. It's a default setting that when the light is off, the DALI dimming mode cannot be switched to another mode.

LF-GSD040YC

Dimension (unit: mm, tolerance: +0.5mm)

Packaging Specification

| Model | LF-GSD040YC |
|---------------------|--|
| Packaging dimension | 385×285×210mm (L×W×H) |
| Quantity | 9 pcs /layer; 6 layers /ctn; 54 pcs /ctn |
| Weight | 0.1636 Kg /pc; 9.82 Kg /ctn |

Transportation & Storage

- 1. Transportation: by means of vehicles, boats and aircraft.
- 2. In transportation, there should be awnings for rain and sun protection. Civilized loading and unloading are required. There should be no severe vibration or impact.
- 3. The storage should be in accordance with the provisions of the Class I environment. Products which have been stored for more than six months must be re-inspected. Use them only after passing the re-inspection.

Attention

- 1. Use this product according to the specifications, please. Otherwise there may be malfunction.
- 2. Use luminaires that have not been certified or are not compatible with the drivers may cause fire, explosion or other hazards.
- 3. Man-made damage is not covered by warranty.
